

4001, 4002, 4003, 4010, 4030, IFB-325 IFB System

Features

This IFB System is a one-way Interruptible Feedback communications system (a program interrupt system) created especially to meet critical requirements of the television broadcast industry, as well as other live or recorded media applications. The system is composed of user stations, central electronics and control panels. A modular approach assures the optimum configuration for each installation. Should system expansion be desired, additional components may be added as necessary. A typical system may consist of the following: up to four control panels, one central electronics unit, four user stations and assorted cabling and interconnect units. The maximum standard configuration allows four control panels, three central electronics, and twelve user stations.
